Hi ,

I am trying to run your OpenId application , I downloaded the source from SVN but it did not compile using maven :

Error: reference to find is ambiguous, both method find(String,Object...) in BaseHibernateEntityDao and method find(String,int,int,Object...) in BaseHibernateEntityDao match

I changed all method names (from find to "findByNamedQuery") and it compiles now. I can launch the application, register myself and get an open id, but when I click on "login" and try to login with my Id I get an exception:

java.lang.IndexOutOfBoundsException: Remember that ordinal parameters are 1-based!

Are you still developing the application ? Do you have any idea how to fix this ?

Thanks,

Ralph Vidal

java.lang.IndexOutOfBoundsException: Remember that ordinal parameters are 1-based!

Would you please show me the full stack trace?

Are you still developing the application ? Do you have any idea how to fix this ?

Thanks,

Ralph Vidal

Hi,

I tried the download "jos-1.2.1-project.tar.bz2" , as well as the svn code ; both cannot compile;

At the attachment the mvn output for the " jos-1.2.1-project.tar.bz2" file as well as for the SVN code ...

Thank you,

Ralph B. Vidal

Would you please use "mvn -X..." to run build, and paste the stdout to me, then I can see the JDK version such as the following:

Apache Maven 3.0.3 (r1075438; 2011-03-01 06:31:09+1300)

Maven home: /usr/share/maven

Java version: 1.7.0_04, vendor: Oracle Corporation

Java home: /Library/Java/JavaVirtualMachines/1.7.0.jdk/Contents/Home/jre

Default locale: en_US, platform encoding: UTF-8

OS name: "mac os x", version: "10.8.2", arch: "x86_64", family: "mac"

...

OK, I give up finding out the reason, and commit revision 576 to avoid this problem.
